

ABM Environment Consultants

HELPING ORGANIZATIONS ACHIEVE A GREENER STANCE

The Indian environmental consulting services market is expanding exponentially. This growth can be attributed to the increase of investments in smart city projects and the strong focus on Make in India initiatives. Moreover, various wastes generated like E-waste, Bio-waste, Haz waste, and Plastic waste, are severely impacting the environment and this problem needs to be mitigated. All this offers several opportunities to environmental consulting companies to reduce the carbon footprint.

However, environmental consulting companies need to be perfectly equipped to meet the plethora of requirements. Designing a customized system & treatment process as per the client's specific requirement, and implementing zero liquid-discharge solutions are two of the leading customer requirements. Provision of regular support & solutions to the customers with necessary modifications as per the changing need of the customer as well as the external environment (statutory norms) is expected. Regular in-house R&D on systems and regular awareness programs need to be conducted to improve the performance & efficiency of the treatment process, pollution control systems, and update citizens.

Carving a niche for itself in this domain ABM Environment Consultants, established in 1994, is involved in the unique designing, construction, commissioning & regular monitoring (post project completion) of air & wastewater pollution management. "We have designed & implemented many customized solutions where treated wastewater is being reused

in the process resulting in the drastic reduction of overall specific consumption," informs N. K. Gupta, Director of ABM Environment Consultants.

Ensuring Complete Customer Satisfaction

The company is perfectly poised in this domain and has successfully catered to some of the most polluting industries like Textile & Dyeing, Paper & Pulp, Slaughter, Electroplating, Steel mills, Dairies, Hospital, Tannery, and so on, both in India & overseas location. Additionally, the company has also worked in the waste management of infrastructure projects, commercial as well as residential.

“
Environmental services, risk assessments, and environmental testing to clients in India and throughout the world

With a market presence of 27 years, the company has attained a complete understanding of clients from multiple industry verticals and is equipped with various technologies available to meet customer expectations. Aware that most environment control solutions available in the market can be very expensive, ABM is dedicated to providing cost-effective

 Managing Director

and flawless solutions. "Operational cost of our design is minimal with the selection of technology & proper execution," adds N. K. Gupta. Additionally, the operation process is user-friendly & requires minimum skill. They also offer flexibility in design & operation for future expansion. Geared up for the future, the team of experts conducts regular review & provide guidance for effective operation.

Committed towards reducing the environmental impact, ABM is preparing organizations and clients for future and prevalent external scenarios, i.e. amendment & addition of rules and their enforcement by Government & statutory bodies. The company also plans to adopt EHS to help in managing the environmental performance, onsite incidents & energy use. "We envision to support the Government of India's efforts to prevent and alleviate environmental degradation caused by industrial operations and assist in the successful attainment of the proposed short and medium-term targets of its environmental policy," concludes N. K. Gupta. ||
